Paper Review form for IEEE EIT 2018

Document Title: Driver Drowsiness Detection System Based on Binary Eyes Image Data	
Author(s): Maninder Kahlon	
Summary of Evaluation:	1 - Award Quality
Significance:	1 - Outstanding
Novelty:	1 - New Idea
Quality of Presentation:	2 - Excellent
References:	1 - Adequate and Appropriate
Comments to Technical Program Committee (confidential): The paper is well organized and prepared carefully, of course I would totally agree to publish this paper right away. In my opinion, it has the award quality. Thus far this perfect paper has not been formatted in the requirements of the EIT sample paper yet, may the authors contact the reviewer by emailing to NLP.Sr@Shaw.ca because I have a Microsoft Word template file that can support the authors to put this work into the correct paper format.	
Comments to Author: This is a very good paper clearly explains real experimental data, methodology, binary data of execution, thresholds, developed algorithm, detection data and results. It is showing that the research work has been conducted very carefully. The system is good and it is able to detect eyes with or without the glasses on, and the future work is also specified thoroughly.	

The paper is well organized, and I would totally agree to publish this paper right away.

Thus far this perfect paper has not been formatted in the requirements of the EIT sample paper yet, may the authors contact the reviewer by emailing to NLP.Sr@Shaw.ca because I have a Microsoft Word template file that can support the authors to put this work into the correct paper format.
